enhance the use  
and biotechnology  
est for the  
Cultural Heritage;

on the type of  
izing different and  
als, by generating an  
microorganisms associated  
Cultural Heritage, and

the advantages of using  
ues for diagnostic purposes

each these objectives several  
e carried out, such as setting up  
, organizing two international  
(March 2001 and July 2002);  
of an advanced course for young  
s and professionals in November  
publishing the proceedings of an  
onal Congress on Molecular Biology  
Cultural Heritage and launching this  
tter, as a mode of communication  
the project.

EC funded project lasted three years  
hough COALITION has continued. At that  
oment the number of subscribers reached  
00 including people in North and South  
America, Asia, Australia, Northern Africa and  
most European countries. During its first three  
years of activity, a total of 31 papers were  
published in six (two of them double) issues,

change of sponsorship, the newsletter is the  
medium for disseminating CSIC Thematic  
Network activities and intends to be an  
international forum for scientists,  
conservators, restorers and students, fostering  
interdisciplinary communication.

We intend that this international newsletter  
could keep on being a place for rendezvous  
between all knowledge concerning Cultural  
Heritage and people involved in it.

In order to make easier the accession to the  
contents of these first ten issues, we have  
prepared an index of the papers already  
published that will be distributed jointly with  
issue 10 of the Newsletter (Figure 1).
